

HTML PARAGRAPHS

A paragraph always starts on a new line, and is usually a block of text.

HTML PARAGRAPHS

The HTML `<p>` element defines a paragraph

A paragraph always starts on a line and browsers automatically add some white space (a margin) before and after a paragraph

Example

`<p>` This is a paragraph. `</p>`

`<p>` This is another paragraph. `</p>`

HTML DISPLAY

You cannot be sure how HTML will be displayed.

Large or small screens and resized windows will create different results.

With HTML, you cannot change the display by adding extra spaces or extra lines in your HTML code.

The browser will automatically remove any extra spaces and lines when the page is displayed

Example

<p>

This is a paragraph

Contains a lot of lines

In the source code,

But the browser

Ignores it

</p>

<p>

This paragraph

Contains a lot of spaces

In the source code,

But the browser

Ignore it

</p>

HTML HORIZONTAL RULES

The <hr> tag defines a thematic break in an HTML page, and is most often displayed as a horizontal rule

The <hr> element is used to separate to content (or define a change) in an HTML page.

Example

`<h1> This is heading 1</h1>`

`<p> This is some text. </p>`

`<hr>`

`<h2> This is heading 2</h2>`

`<p> This is some other text. </p>`

`<hr>`

HTML line breaks

The HTML `
` element defines a line break

Use `
` if you want a line break (a new line) without starting a new paragraph

`<p> This is
 a paragraph
 with line breaks </p>`

The `
` tag is an empty tag which means that it has no end tag.

THE POEM PROBLEM

The poem will display on a single line:

Example

`<p>`

My Bonnie lies over the ocean.

My Bonnie lies over the sea.

My Bonnie lies over the ocean.

Oh, bring back my Bonnie to me.

`</p>`

THE HTML <pre> Element

The HTML <pre> element defines preformatted text

The text inside a <pre> element is displayed in a fixed width font and is preserves both spaced and line breaks.

Example

<pre>

My Bonnie lies over the ocean.

My Bonnie lies over the sea.

My Bonnie lies over the ocean.

Oh, bring back my Bonnie to me

</pre>

<u>Tag</u>	<u>Description</u>
<p>	Defines a paragraph
<hr>	Defines a thematic change in the content
 	Inserts a single line break
<pre>	Defines pre-formatted text
